

## **DMPS FAST Analysis Dashboard**

The FAST Analysis Dashboard has been updated with fall results. This dashboard contains information for both Literacy and Math. Users can review building results and results disaggregated by student groups and grade levels. The Early Reading Screener is used for students in kindergarten and first grade while the CBM Reading Screener is used for students in second and third grade. This dashboard contains several different views, below is a short summary for each of these views.

### **FAST Year Over Year Comparison**

This view shows the general trend of the percentage of students meeting benchmark for the district and schools over the past three years. This view allows users to compare their school to the district total and other schools. The filters on the right can be used to choose between literacy and math or a variety of student demographic information. The test results in this view stay where the student tested.

### **FAST Analysis by Group**

This view shows the general trend of the percentage of students meeting benchmark for the district or a specific school over the past three years. This view allows users to compare student groups to ensure all students are learning at a high level. The filters on the right can be used to choose between literacy and math or a variety of student demographic information. The test results in this view stay where the student tested.

### **FAST Analysis by Grade**

This view shows the percentage of students meeting benchmark for the district and school for each grade. This view allows users to compare the grade levels in their school and compare that to other schools and the district total. The filters on the right can be used to choose between literacy and math or a variety of student demographic information. The test results in this view stay where the student tested.

### **Literacy Status – This view will not be updated until after MAP testing**

This view shows individual student level information with their literacy status. The view defaults to students who are persistently at risk, the filter on the right can be used to change this option. This is a user specific view, where access is restricted to only students currently enrolled in your building.

### **FAST Student Level Information**

This view shows individual student level information for multiple years across different subtests. This view allows users to see the trend for individual students. The filters on the right can be used to choose between literacy and math or a variety of student demographic information. The test results in this view stay with the students, regardless of where they took the test. This is a user specific view, where access is restricted to only students currently enrolled in your building.
